Cedar Field Station Guide

Sample transport

The fictional Cedar Field Station stores water samples in blue insulated boxes during transport. Each box holds six sealed sample bottles. A transport log records the sample label, collection time, and box number. These invented handling rules are intended only to test document retrieval. They must not be used as scientific or safety advice for real samples.

Cedar Field Station Guide

Dispatch and visits

Cedar Field Station dispatches sample boxes at 14:00 each Wednesday. A visiting group may contain at most eight people. Group visits must be requested three working days in advance. The station is a different fictional organization from the Harbor Research Room. Its eight-person limit and three-day notice period do not amend Harbor's visitor rules.

Cedar Field Station Guide

Retention and omissions

Cedar Field Station retains transport logs for ninety days after dispatch. An operator checks the sample labels before a box leaves the station. This guide does not give the station director's name, a budget, the chemical composition of a sample, or a train timetable. No statement here sets a minimum age for visitors. The guide contains deliberately limited evidence for abstention testing.
